

Innovating, through Process & Technologies - Since 1987

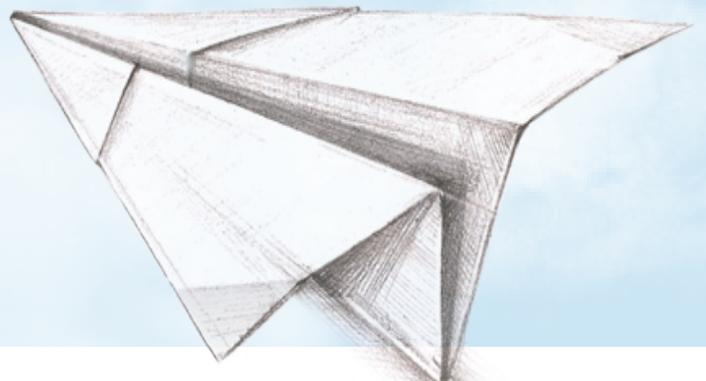

We are premier one-stop-shop for Enterprise Application Development, Web & Mobile Applications and Technical Recruiting. Our Better Business Bureau rating is A+ for our customer service and overall business operations. We strive to maintain our rating by exceeding customer expectations every day.

"Thanks so much for your excellent work! The ATI team was very responsive to

my specific requests for the look and development of the site and had an excellent turnaround time on each task. I would recommend their services to others for sure."

Problem Solvers:

The value we offer is unique, since we solve problems that traditional application development firms have created, and we save our customers' money and resources. We review your organizational needs, issues, and goals, to help you succeed and solve any problems in our area of expertise. We build strategic long-term client relationships, and 80% of our revenue comes from our existing customers.

Competitive:

We are highly competitive because of our ability to use open source, and effectively calibrated development processes. Additionally, your team can focus on higher end product management activities, as our team operates with low management overhead. We follow agile software development methodologies at ATI, which evolve alongside web and mobile technologies, and are well suited for application development. They enable short development cycles and deliver working software at early stages of projects.

Expert Developers:

We have designed, developed, and maintained hundreds of custom websites, portals, apps, and software. Our development team is led by veterans from top performing IT companies, who play a great role in providing reliable solutions. The ATI team is exceptional at leveraging open source software. Additionally, our team includes Microsoft and Sun Certified engineers with a solid hands-on working experience.

Risk Management for Project Execution:

At ATI, we understand information is essential to efficient and effective businesses. We strive to reduce risks that might impact the progress of projects, by deciding the best suitable and cost-effective measures needed to be executed. As a result, risk of miscommunication about software features and functionalities are greatly reduced, and customer satisfaction with our company increases.
